

Table S2. Factors associated with 3-year mortality among operated and unoperated patients in multivariable cox-regression analysis.

	<b>Surgical AVR, n=351</b>			<b>Unoperated patients, n=91</b>

AVR, aortic valve replacement; HR, hazard ratio; CI, confidence interval; NYHA, New York Heart Association; LVEF, left ventricular ejection fraction. Unequal numbers of rows in the two groups is due different number of events.
