Table 1. Risk of MI amongst non-smokers and ex-smokers who have abstained from smoking for more than 15 years in relation to passive smoking in a home and public setting.

Amongst non-smokers and ex-smokers who have abstained from smoking for >15 years				
	Cases (N=153)	Controls (N=291)	Age OR (95%CI)	AdjOR (95%CI)
Exposed to passive smoking at home and in public	18 (11.8)	29 (10.0)	1.2 (0.6-2.3)	2.5 (1.1-5.9)
Exposed to passive smoking at home only	8 (5.2)	10 (3.4)	1.4 (0.5-3.8)	1.5 (0.5-4.8)
Exposed to passive smoking in public only	73 (47.7)	156 (53.6)	0.9 (0.6-1.4)	1.3 (0.7-2.3)
Not exposed to passive smoking	54 (35.3)	96 (33.0)	1.0	1.0

ORs were adjusted for age [Age OR], and for age, sex, regular alcohol consumption, reported hypertension, hypercholesterolemia, diabetes and BMI [AdjOR].
95%CI – 95% confidence interval
