

Table S1. Baseline variables included in propensity score (binary logistic regression) calculation

Variable

Age

Sex

Cardioprotective medication use:

Angiotensin-converting enzyme [ACE]-inhibitor

Beta[β]-blocker

Calcium channel blocker

Digoxin

Diuretic

Statin

Antiplatelet therapy (mainly aspirin)

sCRF

Diabetes mellitus

Modified Charlson comorbidity index

Prior CABG

Prior PCI

History of atrial fibrillation

Co-existing valvular disease

BMI

Resting blood pressure

Resting HR

TC/HDL-c ratio

Self-report physical inactivity

Indices of multiple social deprivation

Employment status

Marital status

Depression

Smoking

Positive exercise test (ECG)

Exercise test modality
