

**Supplementary table 3 - Exploration of different cut-offs on validation cohort**

	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>
Percentage of patients receiving MSCT	38	38	64	64
Sensitivity	81	81	53	53
Specificity	46	46	71	71
Positive predictive value	37	37	42	42
Negative predictive value	86	86	79	79
Price per patient (€)	1035	1035	1117	1117
Radiation per patient (mSv)	7.5	7.5	7.8	7.8

The results of different proposed cut-offs calculated on the The Western Denmark Heart Registry cohort. Calculated with the mean price of MSCT and CAG of 1129.3 € for CAG and 395.74 € for MSCT and radiation dosage (mSv) calculated for a mean dosage of 8.5 mSv for CAG and 2.1 mSv for MSCT. (MSCT – Multislice Computed Tomography, CAG – Coronary Angiography)
