STEMI Type:

Definition:

Treatment:

## Early Phase STEMI

ST elevation on ECG FMC\* <12 hours of symptom on set

- -Primary PCI within 2 hours of diagnosis by experienced team -If PCI within 2 hours not possile, TLTs hould be
- commenced within 10 minutes -Afters uccessfull fibranalysis, routine PCI within 2-24 hours

afterTLT

-Resicue PCI inficated for failed fibrinolysis

## **Evolved STEMI**

ST elevation on ECG FMC 12-48 hours of symptom onset

- -Primary PCI if indicated where sympoms suggestive of is chaemia
- -For others, routine PCI should be considered

## Recent STEMI

ST elevation on ECG FMC >48 hours of symptom onset

-Routine PCI not indicated in asymptomatic patients presenting after 48 hours
