Online Figure 1. Definitions of chest pain characteristics

- **Presenting with angina-like chest pain**
  - **Stable angina pectoris**
    - **Typical angina pectoris**
      - Meets all three of the following criteria:
        1. Substernal chest discomfort of characteristic quality and duration;
        2. Provoked by exertion or emotional stress;
        3. Relieved by rest and/or nitrates within minutes.
    - **Atypical angina pectoris**
      - Meets two of the typical angina pectoris criteria
    - **Non-anginal chest pain**
      - Meets one or none of the typical angina pectoris criteria
  - **Unstable angina pectoris**
    - No significant changes in ECG characteristic for ischemic heart disease and no significant changes in myocardial specific biomarkers and Angina pectoris at rest or during minimal physical activity or crescendo angina or post AMI (patients excluded in this study).
