

Supplementary table S1 - Multivariate logistics regression models for prediction of pacing-associated cardiomyopathy

Factor	p value	Exp (B)	95% CI
Gender (male)	0.466	1.402	0.565 - 3.480
Age	0.634	1.010	0.969 - 1.051
Gender (male)	0.753	0.859	0.333 - 2.212
Age	0.997	1.000	0.957 - 1.045
Systemic LV (ref.)			
Systemic RV	0.617	1.295	0.470 - 3.565
Univentricular	0.117	0.268	0.051 - 1.392
Gender (male)	0.742	0.829	0.271 - 2.536
Age	0.979	1.001	0.950 - 1.054
Systemic LV (ref.)			
Systemic RV	0.421	1.627	0.497 - 5.331
Univentricular	0.524	0.541	0.082 - 3.577
<b>VP%*</b>	<b>0.001</b>	<b>1.057</b>	<b>1.021 - 1.081</b>
Gender (male)	0.630	0.761	0.250 - 2.313
Age	0.793	1.007	0.952 - 1.060
Systemic LV (ref.)			
Systemic RV	0.435	1.607	0.488 - 5.292
Univentricular	0.550	0.558	0.083 - 3.776
<b>VP%*</b>	<b>0.001</b>	<b>1.051</b>	<b>1.021 - 1.081</b>
Duration pacing (years)	0.826	1.006	0.956 - 1.058

\*VP% presented as continuous variable; i.e. Exp (B) represents change per 1% increment of ventricular pacing. CI = confidence interval, LV = left ventricle, RV = right ventricle, VP% = ventricular pacing percentage
