

### Supplementary Materials

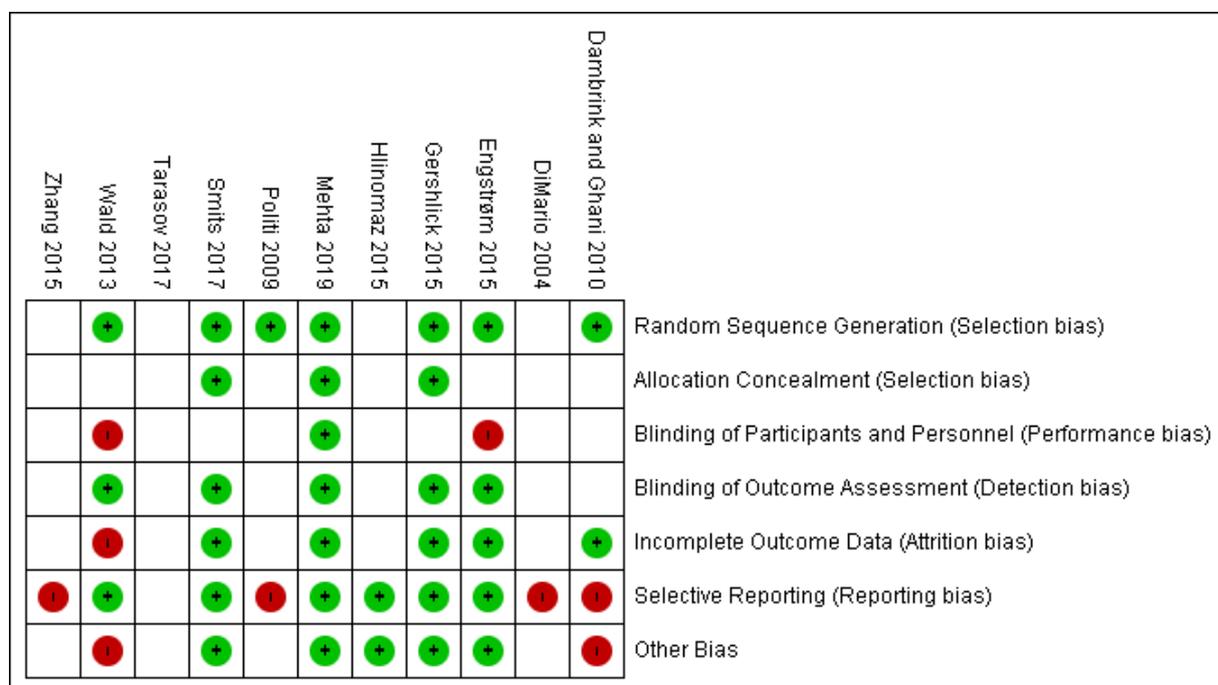

#### Early versus delayed complete revascularization in patients presenting with ST-segment elevation myocardial infarction and multivessel disease.

#### A Systematic review and meta-analysis

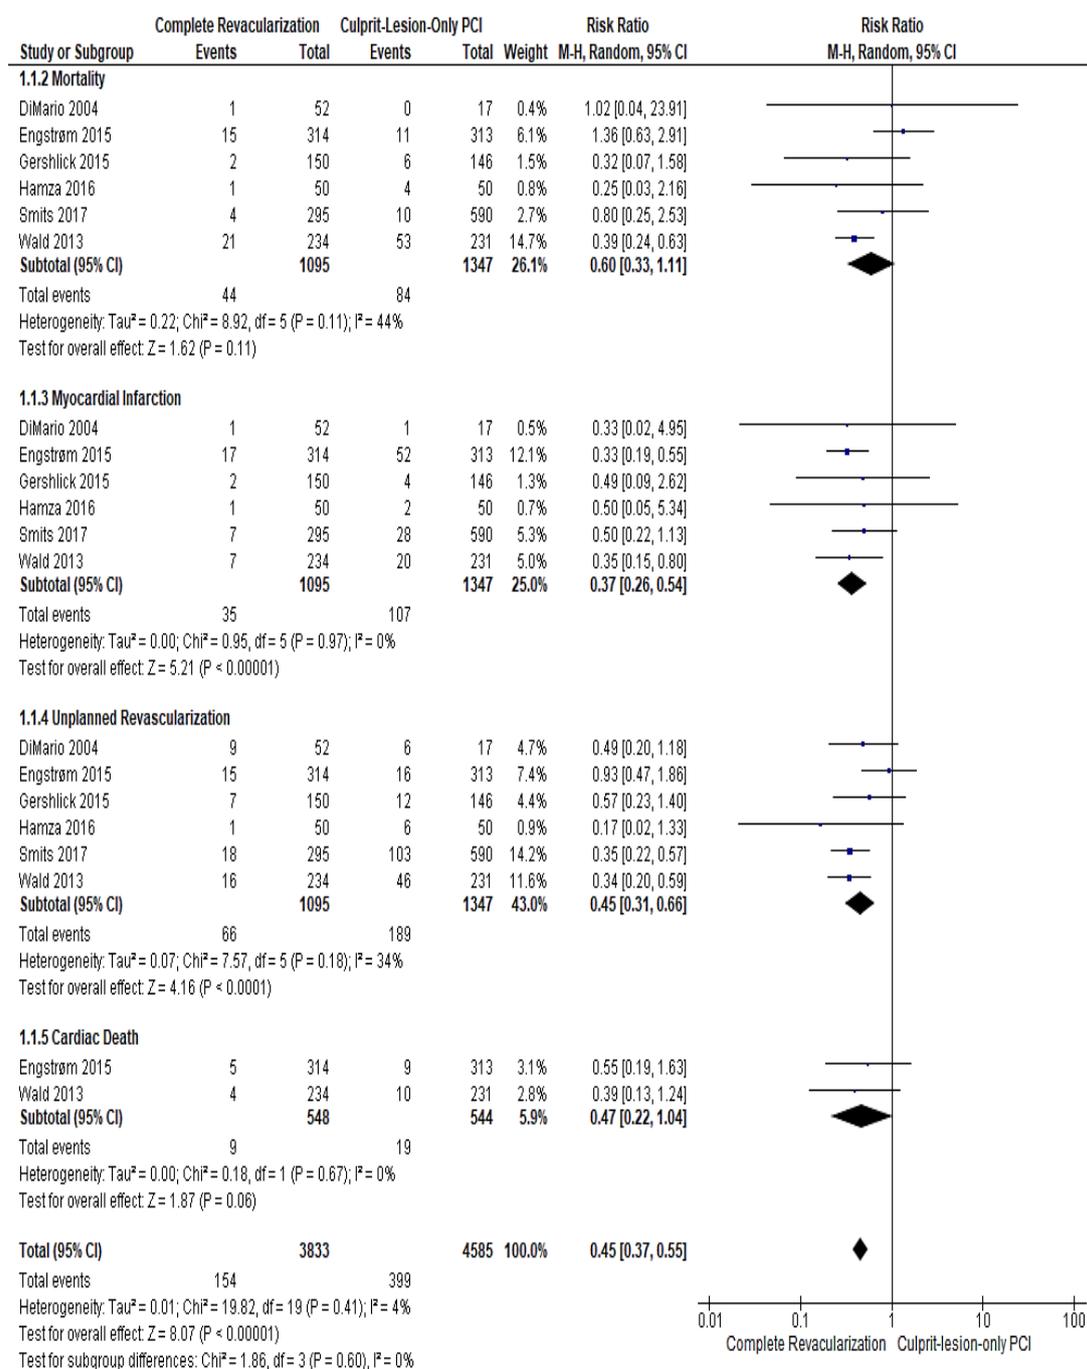

**Supplementary Figure I.** Risk of bias graph reviews authors' judgements about each risk of bias item presented as percentages across all included studies.

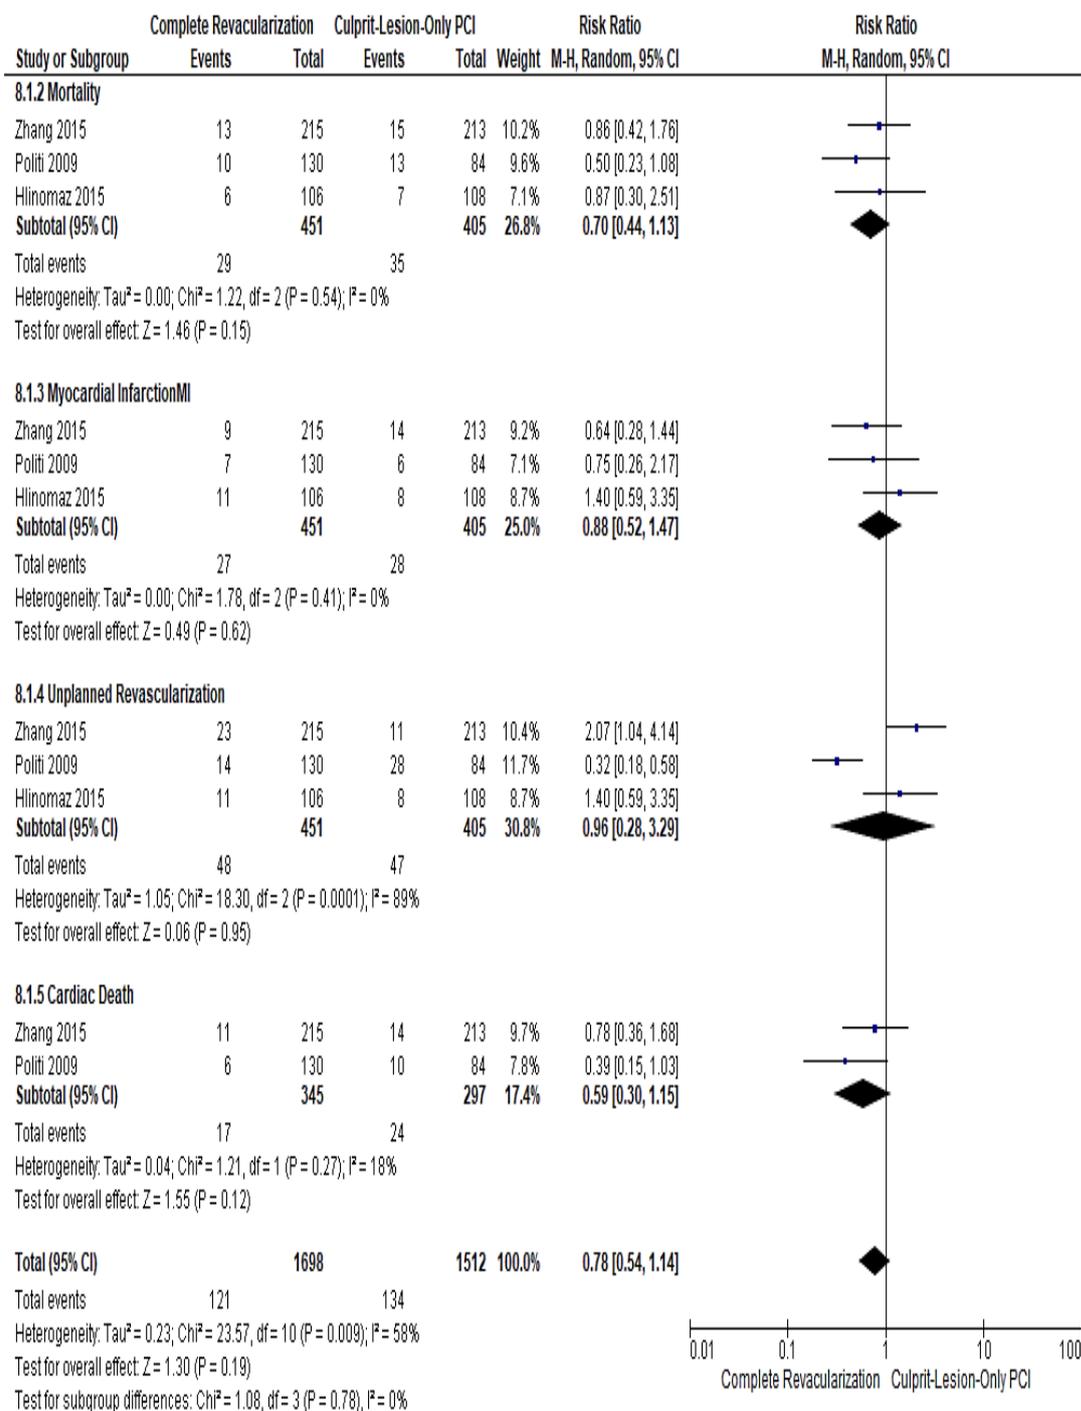

**Supplementary Figure II.** Risk of bias summary reviews authors' judgements about each risk of bias item for each included study.

**Supplementary Figure III:** Forest plot of comparison of all-cause mortality, myocardial infarction, unplanned/repeat revascularization, and cardiac death between early complete revascularization versus culprit lesion only PCI.

**Supplementary Figure IV:** Forest plot of comparison of all-cause mortality, myocardial infarction, unplanned/repeat revascularization, and cardiac death between delayed complete revascularization versus culprit lesion only PCI

**Supplementary Table I.** Summary and *Population characteristics of the selected randomized controlled trials.*
