

**Supplemental table 3: Procedural characteristics according to post-procedural hs-TnT ( $\geq 70$ x ULN).**

Variable	No elevation (n=471)	Elevated $\geq 70$ x ULN (n=12)	p value
<i>CTO target vessel</i>			
Right coronary artery	255 (54)	8 (67)	0.390
Left anterior descending artery	129 (27)	3 (25)	0.855
Circumflex artery	84 (18)	1 (8)	0.393
Left main coronary artery	3 (0.6)	0 (0.0)	0.782
Stenting performed	384 (82)	10 (83)	0.873
Stent length >48mm	212 (55)	6 (60)	0.757
Procedure time (min)	75 (45-101)	101 (48-124)	0.172
Fluoroscopy time (min)	24 (15-37)	41 (20-68)	<b>0.028</b>
Technical success	383 (81)	9 (75)	0.581
Procedural success without major complications	379 (81)	5 (42)	<b>0.001</b>
Major complications	12 (3)	6 (50)	<b>&lt;0.001</b>
Major vascular complications	4 (0.8)	0 (0.0)	0.749

Values expressed as median (interquartile range) or n (%).
